

Powersuite Professional

Electrical test and PAT software

- **User friendly' Windows interface**
- **Work in real certificates and forms**
- **Work on site or back in the office**
- **Download results from Megger and 3rd party test equipment**
- **Equipment maintenance module**
- **Organiser manages future appointments**
- **Client manager to organise your customers**
- **Full database and reporting facilities**

DESCRIPTION

Powersuite Professional is the next generation of Megger software replacing the existing Megger Powersuite package, designed for the management of test results from electrical testing and PAT testing, including client management and asset maintenance

Powersuite Professional covers a range of software levels which consist of a series of upgradeable packages starting with the Pro-Lite PAT or Pro-Lite16th edition (non-data based operation) and moving onto the Contractor packs through to the Power pack, which covers all the demanding requirements of the Electrical and PAT testing organisations and contractors.

All packages from the Contractor PAT and 16th packs provide a data based client, assets and results management package that provides the ideal solution to managing electrical and Portable appliance test results.

All Professional packages from Contractor PAT or 16th onwards are fully data based, ensuring all records and downloaded data is allocated to the appropriate customer on which a number of reports can be run.

Each level of Powersuite Professional offers additional modules and functionality, providing the ideal entry point for the widest range of customer requirement. Clients, locations and assets, including all electrical test results, can be moved freely within the Powersuite client manager using mouse drag and drop.

Data can be downloaded from Megger test equipment or

3rd party test instruments (Industrial pack onwards) and parked until all testing is complete, then assigned to the relevant client record. Alternatively results can be imported directly to a form, which automatically extracts the client and location data into the form header.

Pro-Lite packages are covered on a separate datasheet.

Advantages of all Powersuite Professional packages include:

- Working in real form layouts, not spreadsheets.
 - Now data is entered directly on a form, not in a spreadsheet.
- High quality results
 - Printed forms are easy to read with no ambiguous writing or mistakes, and look professional.
- Wizard driven operations, toolbars and drop-down menus
 - Greater flexibility and productivity, while reducing training times.
- Client and location manager
 - Keeps your customer details and locations for simple importing to certificates
- Download test results or direct data entry to certificates
 - Import data from a test instrument of use as a form filler
- Simplified download data management
 - With a built-in download manager window, downloads can be saved until ready to import to the

required certificate. All downloads are date and time stamped to prevent overwriting.

- Form customerisation
 - Simply click the Certificate Wizard to create completed or blank certificates
- Easy certificate generation
 - Company Logo import facility to personalise the look of your forms.
- Visibility of Clients, download files, assets and results without the need to switch software modules.
 - Data held in separate windows and can be moved as required

Further more, each package offers a progressive level of functionality, with additional features and functions, concluding with the Professional Power package. Individual package details include:

Contractor PAT and 16th - for PAT or Electrical testing

This package is designed for electrical testing personnel that require a fully data based package. Typical functions include:

Contractor 16th Pack

- Download Manager – for Megger download support. A wide range of drivers are available for Megger 16th Edition electrical test instrumentation.
- Certificate Manager - Extensive 16th Edition certificates, including ECA, IEE, NICEIC and BS Electrical test certificates or PAT testing forms.
- Contacts manager – Simple graphical view of all your Clients, Locations and contact details.
- Database – Client and results database manager links all your customers with their test results, by simple drag and drop editing.
- Front page – automatically appends a header page to your reports, from a choice of four different formats.
- Organiser module - for scheduling work load, site work, retesting etc. The ‘at a glance’ graphical diary will display historical and forthcoming events and appointments etc.
- Reports module – A wide range of reports can be generated for electrical installation testing.

Contractor PAT Pack

For dedicated PAT testing. As Contractor 16th but all 16th Edition certificates are replaced by a range of PAT testing reports. Only Megger PAT4 drivers are supplied for downloading instruments.

Contractor Full Pack

Combines all the features of both Contractor 16th and Contractor PAT in one fully integrated package. All portable appliances and electrical test results are managed by client and location and can easily be relocated.

...PLUS the addition of the Project Billing module completes the contractor package.

■ Billing module

The Billing module provides simple job costing and invoicing facility. The billing pages are automatically paginated and can be embedded into a complete deliverable report.

Industrial Pack

As your requirements increase, expand your Powersuite Professional capabilities...

The ‘Industrial’ pack includes the full Contractor package PLUS:

- Digital Photography module allows the addition of digital photographs in your documentation, increasing clarity in reports whilst reducing the amount of explanations needed to describe a problem, saving time and reducing confusion
- Viewer CD allows anyone to keep, view and print an electronic copy of certificates or reports without the need to install Powersuite Professional. The viewer provides a safe method of viewing documents without the risk of changing data.
- 3rd party instrument download drivers are included for other manufacturers Portable Appliance Testers and electrical installation testers, allowing importation of test results on existing non-Megger instruments.
- Extended forms offer alternative and extra certificate formats including Filling stations and Security Systems, ensuring there is normally a form to meet your requirements.

Power Pack

Includes the full ‘Industrial’ modules and features PLUS

- Document designer module – for creating your own customised certificates and reports for printing on plain paper. Edit an existing document or create a new one from scratch Documents can be personalised and fonts changed.
- Maintenance Module – An essential tool for managing the multitude of equipment that is not covered by periodic electrical testing. Such items include ladders, fire extinguishers, saws etc. Such items are fully integrated into your Powersuite Professional database and retesting can be managed through the organiser module.

Additional assets can be added as necessary and the test parameters defined. Custom certificates can be created from the document designer.

For customers that have specific requirements not met by the existing Powersuite Professional packages

A bespoke service is also available. Further details are available by contacting our sales department on:
