

# MIT480 Series

# **Telecommunications Insulation Testers**

- Insulation testing from 50 V to 1000 V
- Up to 200 GΩ range
- 75 V test inhibit
- TRMS & DC Voltage measurement
- Continuity testing at 200 mA or 20 mA
- Capacitance measurement to 10 uF
- Cable length by capacitance
- Silicone test leads

# DESCRIPTION

The Megger MIT480 series instruments have been developed specifically for the telecommunications industry. The insulation and continuity testers combine the latest range of measurement techniques with new instrument design to provide a state-of-the-art tester that is compact and comfortable to hold.

The MIT480 series directly replaces the well-established BM80 product group, given greater functionality with simplified operation and greater application range.

# The range:

MIT480 50 V, 100 V tester

MIT481 50 V, 100 V, 250 V, 500 V, 1000 V tester

MIT485 As 481 plus downloading results

# **INSULATION TESTING**

- **Test voltages** 50 V/100 V or 50 V to 1000 V insulation test voltages available depending on instrument. The actual test voltage is displayed on the smaller digital readout, with the insulation result on the larger digital display.
- Analogue arc The display also features an analogue arc to replicate the response of a moving coil display.
- **Insulation leakage current** The MIT481 and MIT485 offer insulation leakage current display, in addition to insulation test voltage.
- **Insulation testing** up to 100 G $\Omega$  or 200 G $\Omega$  test range are available.

- **Silicone test leads** (supplied) are essential to prevent error in measurement on insulation tests of greater than  $10~\text{G}\Omega$  .
- Test inhibit prevents testing if voltages in excess of 75 V are detected when making insulation tests.
- **Test lock** allows the insulation test to be 'locked' on continuously.
- **Timed testing** MIT481 and MIT485 have timed insulation test options.

# **CONTINUITY AND RESISTANCE**

- **200 mA or 20 mA** Either 200 mA or 20 mA continuity test currents are available. 20 mA test current will considerably increase battery life.
- Auto test on circuit contact enables real two handed operation without the need to press the test button.
- **Lead null** Lead resistance compensation (NULL) operates up to 9.99  $\Omega$  of resistance.
- **Buzzer ON-OFF** selected by push button.
- **Limit alarm** Continuity buzzer limit alarm provides adjustment of the maximum acceptable resistance. Resistance below the set limit sounds the buzzer. This is adjustable from  $1\ \Omega$  to  $20\ \Omega$  in 5 steps.
- **k**  $\Omega$  **range** extends resistance measurement from 10  $\Omega$  to 1 M $\Omega$ .

# CAPACITANCE MEASUREMENT

- Capacitance measurement auto ranges from 0.1 nF to 10 μF. Results are displayed on the primary digital display.
- **Cable length** is displayed on the secondary display. Cable length is calculated from an adjustable cable capacitance reference (default 50 nF/km).
- Cable capacitance reference A variable value for distance calculation is adjustable from 40 nF/km to 60 nf/km.
- **km or Feet** Can be displayed, selected in set-up.

#### **VOLTAGE AND FREQUENCY**

- CATIV Suitable for use on circuits up to 600 V CAT IV.
- AC voltage measurement is True RMS up to 600 V.
- DC Voltage measurement to 600 V.
- Fully auto-ranging from 10 mV up to 600 V provides wide range of applications and suitable for transducer inputs
- A default voltmeter is activated on any test function if a circuit voltage is detected.

#### OTHER INSTRUMENT FEATURES

- All tests will be inhibited if a live circuit voltage above 75 V is detected.
- Instrument fuse failure will not affect instrument safety functions.
- Rubber boot combines the tough shock absorbing outer protection with excellent grip, on a strong modified ABS housing, providing an almost indestructible case.
- Battery requirements are 5 AA batteries of either standard Alkaline or Nickel Metal Hydride (NiMH) rechargeable type.
- Battery condition status is permanently displayed.

# STORAGE AND DOWNLOADING RESULTS

#### МIТ**4**8′

The MIT481 is capable of saving test results for recall to the screen. A simple storage structure allows for a test number and screen results to be recalled individually.

# **MIT485**

The MIT485 supports both test result storage and downloading.

Test results can be stored in the instrument and subsequently downloaded to a computer with the Megger download manager software.

Data transfer is by Bluetooth, with the MIT485 Bluetooth transmitter being enabled when the Download mode is selected on the instrument.

NOTE: The receiving PC needs to have Bluetooth capability or a USB port fitted a Bluetooth receiver. Class II (10m) is acceptable.

# **SAFETY**

Meet the international requirements of IEC1010-2 as well as those for EN61557 (not MIT480 Vout. < 100 V).

Live circuit detection inhibits insulation or continuity testing on circuits above 75 V.

Live circuit detection functions even if the protection fuse has failed.

### **TEST LEADS**

The test leads supplied with the MIT480 series are high quality silicone leads, which are essential when measuring above 10 G $\Omega$ .
